CS101 Exam 2 Vocab Review

Across

✓**1.** The three v's of big data are __, velocity, and variety

✓**5.** The decision-making component of a robot

✓**10.** A device smarter than a repeater that has knowledge about the nodes on each bus or LAN

✓**11.** Occurs when two messages are sent at the same time on a shared communication line

✓**14.** A type of supervised learning with discrete labels

✓**15.** A device that amplifies and forwards a signal

✓**16.** A herd of computers controlled to perform a task without the user's permission

✓**19.** An individual computer on a network

Down

✓**1.** When the real world is entirely replaced with a digital environment, its _____ reality

✓**2.** The portion of data used to train a machine learning model before validating

✓**3.** A user who has more privileges than others

✓**4.** The three d's of robotics are dull, ___, and dangerous

✓**6.** The factor that determines whether a machine learning model should use the information it already has

✓**7.** The ability of a robot or machine to act without human control or intervention

✓**8.** The subsystem that allows a robot to sense and understand itself and its environment

✓**21.** The internet protocol layer whose goal it is to deliver packages from source port to destination port

✓**27.** Governs what an authenticated user is allowed to do

✓**29.** The devices that allow a robot to manipulate its surroundings

✓**34.** The process of verifying that you really are the person who has the right to access a given computer

✓**35.** A type of machine learning that uses neural networks

✓**36.** Malware that pretends to only do a legitimate task while also breaching security

✓**38.** A type of machine learning based on rewards and punishments

✓**39.** A term formed from the phrase malicious software

✓**9.** The speed at which information changes in big data

✓**12.** A reliable transmission protocol

✓**13.** Level 3 autonomy, decisions and movements are approved by a supervisor

✓**17.** Training a model to correspond too closely or exactly to a particular set of data

✓**18.** Data science at the intersection between computer science, domain expertise and ___

✓**20.** The values that describe the data in ML

✓**22.** The practice of hiding the existence of a message

✓**23.** The type of encryption key that is known only to the user and is never shared

✓**24.** The type of node needed as the center of a star topography

✓**25.** The rate at which information can be sent and received across a network connection

✓**26.** Applying a mathematical one-way function to create a "signature" of the input

✓**28.** The name of a confirmation signal used in the ARQ algorithm

✓**30.** A single element in a neural network. It has inputs, weights, an activation function, and an output

✓**31.** The subsystem that allows a robot to move and interact with objects in the environment

✓**32.** Used to store data for transactional purposes

✓**33.** an unreliable transmission protocol

✓**37.** A type of device that can translate signals between different types of nodes
