Create Project Response #1

1a. **TITLE:** Tristen Erpelding, CSCI 101 Section H, HTML Modular Web Scrapper

1b. **PROGRAM:** The program I am going to write is an HTML web scrapper that will parse the HTML code on a webpage. The user will input a webpage they want to parse. Then the program will print out all the different tags that the user can select from that they want to copy. After the user selects the tags they want, the program will copy the text within the tags and save that data in a file.

1c. **PROCESS:** The program will ask for the user to input a valid URL. Then program will read all the HTML on the webpage and display a list of the HTML tags within the HTML code. The user will then select which tags they want the text to be copied from. After, the program will then copy the text within the HTML tags and save it to a file. I will be collaborating with my peers and asking them what they think about the functionality of the program. I will also ask if there are areas that need improvement or need to be changed.

1d. **CONCERNS**: No, I do not have any special needs and I don't think I'll need any help on something.
