Nueralink: Uploading the Brain

Nueralink is a company created by our tech savior Elon Musk, aimed to create a brain-machine interface (BMI). With a successful BMI the possibilities of new technologies created are limitless. The BMI that Nueralink is creating consists of tiny probes made of microscopic electrodes connected to various areas of the brain. These areas are the visual cortex, auditory cortex, somatosensory cortex, and motor cortex. While the BMI is connected to these parts of the brain it will be able to read the signals the brain is sending and decode these signals into a usable format for future applications.
