Before:

```
import java.util.ArrayList;

public class TheMotivator {
    private ArrayList<String> names = new ArrayList<String>();

    public void createNames() {
        names.add("TheMotivator");
        names.add("TheMotivator2");
        names.add("TheMotivator3");
    }

    public void feedback(int score) {
        if (score == 100)
            System.out.println("You're awesome");
        else if (score > 90)
            System.out.println("That's great");
        else if (score > 60)
            System.out.println("That's good ");
        else
            System.out.println("Well, what can I say?");
<<<<<<< HEAD
        System.out.println("No Test");
=======
        System.out.println("Test");
>>>>>>> MoreStuff
    }

    public void name() {
        for (String name : names) {
            System.out.println(name);
        }
        System.out.println("I motivate");
    }

    public static void main(String[] args) {
        TheMotivator mtoive = new TheMotivator();
        mtoive.feedback(60);
        mtoive.createNames();
        mtoive.name();
    }
}
```

After:

```java
import java.util.ArrayList;

public class TheMotivator {
    private ArrayList<String> names = new ArrayList<String>();

    public void createNames() {
        names.add("TheMotivator");
        names.add("TheMotivator2");
        names.add("TheMotivator3");
    }

    public void feedback(int score) {
        if (score == 100)
            System.out.println("You're awesome");
        else if (score > 90)
            System.out.println("That's great");
        else if (score > 60)
            System.out.println("That's good ");
        else
            System.out.println("Well, what can I say?");
        System.out.println("Test");
    }

    public void name() {
        for (String name : names) {
            System.out.println(name);
        }
        System.out.println("I motivate");
    }

    public static void main(String[] args) {
        TheMotivator mtoive = new TheMotivator();
        mtoive.feedback(60);
        mtoive.createNames();
        mtoive.name();
    }
}
```
